DOCKET FILE COPY ORIGINAL

Dear Chairman Hundt,

As an ISDN advocate, I want to thank the Commission for its decision, released May 30, 1995, suspending the requirement that raises the number of subscriber line charges for ISDN, and I strongly encourage the Federal Communications Commission to act favorably and quickly on the pending Notice of Proposed Rulemaking (CC Docket No. 95-72).

Today, ISDN provides quick, affordable access to the Internet, enabling schools, libraries, non-profit organizations, government facilities, small businesses, families, students and researchers nationwide to tap into vast on-line resources and information. I do not want to see ISDN rate hikes driven by old rules and regulations.

ISDN is also a very useful feature for a variety of business applications such as remote LAN access, and videoteleconferencing. ISDN allows users to be more efficient and conduct business at a lower cost than analog telephone lines. In addition, ISDN is a major force in the burgeoning telecommuting movement, which heightens corporate productivity while protecting our environment.

I support the policy approach presented by Pacific Bell in its waiver petition because it is a favorable approach which could be quickly implemented with minimal customer impacts.

Again, I thank the FCC, and I urge the Commission to rule quickly and favorably in the pending NPRM. After all, technology must be accessible to all Americans --- not just the technologically elite.

Sincerely,

Director SAT USA

DOCKET FILE COPY ORIGINAL

Dear Chairman Hundt,

As an ISDN advocate, I want to thank the Commission for its decision, released May 30, 1995, suspending the requirement that raises the number of subscriber line charges for ISDN, and I strongly encourage the Federal Communications Commission to act favorably and quickly on the pending Notice of Proposed Rulemaking (CC Docket No. 95-72).

Today, ISDN provides quick, affordable access to the Internet, enabling schools, libraries, non-profit organizations, government facilities, small businesses, families, students and researchers nationwide to tap into vast on-line resources and information. I do not want to see ISDN rate hikes driven by old rules and regulations.

ISDN is also a very useful feature for a variety of business applications such as remote LAN access, and videoteleconferencing. ISDN allows users to be more efficient and conduct business at a lower cost than analog telephone lines. In addition, ISDN is a major force in the burgeoning telecommuting movement, which heightens corporate productivity while protecting our environment.

I support the policy approach presented by Pacific Bell in its waiver petition because it is a favorable approach which could be quickly implemented with minimal customer impacts.

Again, I thank the FCC, and I urge the Commission to rule quickly and favorably in the pending NPRM. After all, technology must be accessible to all Americans --- not just the technologically elite.

Sincerely,

The Honorable Reed Hundt
